SUMMARY

Full-stack software engineer with 4+ years of experience building React/Redux and Angular frontends, .NET/C# microservices, REST APIs, AWS services, and CI/CD workflows. Targeting AI Engineer / Full-Stack AI Engineer roles by combining production software engineering with GenAI application patterns including AI agents, AI-assisted SDLC automation, RAG-ready domain data, semantic search, tool/API integration, prompt/context engineering, and LLM evaluation concepts.

SKILLS SUMMARY

Languages : Java, JavaScript/TypeScript, C++, C#, Python, SQL, HTML5/CSS, XML.

AI Engineering: Generative AI, AI Agents, LLM Integration Concepts, Agentic Workflows, RAG, Semantic Search, Embeddings, Vector Database Concepts, LangChain/LangGraph Concepts, MCP-Style Tool Calling, Prompt/Context Engineering, LLM Evaluation, Guardrails.

Frontend : React, Redux, Angular, Next.js, Tailwind, Material UI, Component-Based UI.

Backend : ASP.NET Core, ASP.NET Web API, Node.js, Express, GraphQL, REST APIs, Microservices.

Testing : Jest, Cypress, React Testing Library, Enzyme, Unit/Integration Testing, AI-Assisted Test Generation.

Cloud & Infra : AWS (EC2, Lambda, S3, API Gateway, IAM), Serverless Architecture, Docker, CI/CD, Deployment Automation.

Databases : PostgreSQL, MySQL, MongoDB, SQL Server, NoSQL, Vector Search Concepts.

Tools : Git, GitHub/GitLab, GitHub Copilot, Jenkins, Azure DevOps, Jira, Teams Integrations, Agile/Scrum.

PROFESSIONAL EXPERIENCE

Enlyte

San Diego, CA

Software Development Engineer, Mitchell Cloud Estimating

Jul 2024 – Present

- Built cloud-native .NET 8/ASP.NET Core microservices on AWS for estimate profile history, audit trails, schema validation, and carrier-specific rules; structured domain metadata to support future semantic search, RAG, and compliance-assistant workflows.
- Developed full-stack React/Redux/TypeScript workflows and REST APIs for Mitchell Cloud Estimating features including annotations, accessory part tagging, reviewer/state logic, and configurable carrier rules across complex insurance-domain flows.
- Modernized legacy .NET Framework/Web API services using AWS Transform, standardizing dependency injection, API contracts, logging, CI/CD deployment, and cloud runtime patterns for scalable, AI-extendable backend services.
- Prototyped AI-assisted engineering workflows using GitHub Copilot, Azure DevOps/Jira context, repository search, Jenkins logs, and Teams notifications to summarize tickets/PRs, identify impacted files, suggest tests, and triage CI/CD failures.

Teradata

San Diego, CA

Software Engineer Intern, Lake Console UI

May 2023 – Dec 2023

- Built Angular/TypeScript compute-resource management workflows for VantageCloud Lake to provision, scale, poll, and manage cloud resources, improving query performance by 25–50% for compute-intensive workloads.
- Applied AI-assisted development practices to accelerate monorepo codebase understanding, component refactoring, debugging, and test-case generation while following enterprise Angular/Nx design patterns.
- Integrated Pendo Resource Center modules for guides, feedback, announcements, and metrics, enabling product telemetry and user-behavior insights for data-driven UX and AI-assisted support opportunities.
- Contributed reusable Angular/Material components to the Covalent open-source library and redesigned the VantageCloud Lake homepage using component-based architecture for distributed cloud UI teams.

ValueLabs

Hyderabad, India

Senior Software Engineer, Mitchell Connect

Mar 2022 – Jul 2022

- Led Redux-based state management migration in React, reducing data-handling defects by 30% and improving application performance, scalability, and maintainability across insurance workflows.
- Designed and built RESTful APIs using ASP.NET Web API, enabling reliable integrations across 3+ cross-functional teams and improving backend service reuse.
- Executed AngularJS-to-React modernization with reusable UI patterns, ensuring zero downtime and uninterrupted customer experience during rollout.

ValueLabs

Hyderabad, India

Software Engineer, Mitchell Connect

Jan 2020 – Mar 2022

- Delivered Jobs & Reports dashboards using React and C#, applying SOLID principles to streamline insurance claim and repair workflows by 10%.
- Built reusable, modular UI components as part of a shared design system adopted by 15+ internal teams.
- Implemented comprehensive unit and end-to-end test coverage with Jest and Cypress, reducing post-production defects and improving release quality.

EDUCATION

Arizona State University

Tempe, AZ

Master of Science in Computer Software Engineering; CGPA: 3.70

Aug 2022 – May 2024

School of Engineering and Technology, Jain University

Bangalore, India

Bachelor of Technology in Computer Science and Engineering; CGPA: 8.016

Aug 2016 – Aug 2020
